Class history—The 82-foot patrol boats have mild steel hulls and aluminum superstructures. Longitudinally framed construction was used to save weight.

These boats were completed with a variety of power plants. 82301 through 82313, 82315 through 82317, and 82319 through 82331 were powered by two Cummins 600-hp diesels. Boats 82318 and 82332 through 82379 received two Cummins 800-hp diesels. The 82314 was fitted with two 1,000-hp gas turbines and controllable-pitch propellers. The purpose of this installation was to permit the service to evaluate the propulsion equipment. All units were eventually fitted with the 800-hp diesels. Units remaining in 1990 were re-equipped with Caterpillar diesels.

WPB 82301 through 82344 were commissioned without names; at that time the Coast Guard did not name patrol craft shorter than 100 feet. In January 1964 they were assigned names.

Ship's history:

The *Point Batan* was stationed at Fort Hancock, NJ, from 1962 to 1965. She was used for law enforcement and search and rescue operations. In mid-October 1965, she towed disabled CG-44322, which had grounded during a rescue, to Point Pleasant, NJ.

From 1966 to 1984, she was stationed at Point Pleasant. During a storm on 25 October 1980, she was damaged by a massive wave in Manasquan Inlet, NJ. This forced her to abort a search and rescue mission.

From 1985, she was stationed at Cape May, NJ.
